

Overview

PondLite is an application I am designing with a .NET backend using C#. It is focused on creating a low/no obligation space that will be used for couples to connect with each other throughout the day. It needs to feel like a fun and safe space to share and connect with each other throughout the day without much commitment. It can also be used to send reminders throughout the day for things like requests for each other, and maybe a quick jot down of what one would like to bring up later to the other. It will also provide a daily thinking about you, a check-in, and an optional discussion. PondLite will implement an AI to help assist in guidance with care and help facilitate discussion posts.

Features (first split):

- Login/Logout system (token-based?)
- Daily emotional check-in
- Daily relationship-oriented discussion
- Reminder space
- Bug-themed gift system
- Frog reactivity and emotional reflection
- Integrated AI to assist with care suggestions (like what to say or do for the other) and daily discussions

Later Features:

- Decorations for pond
- Child frogs
- Daily streak tracker
- Marry feature
- Interaction between frogs
- Wandering frogs
- Sound
- Reminders
- more...
